

## Claim Amendments

Please amend claims 14-25 as follows:

1. (original) A method of cleaning a material contaminated with a radioactive contaminant, comprising the step of contacting the material with a cleaning composition comprising:
  - (a) an oil solubilizing amount of a degreaser;
  - (b) a rubber solvent; and
  - (c) a polar, organic diluent; wherein at least one of the degreaser, rubber solvent, and the polar, organic diluent has a flash point of at least 30°F.
2. (original) The method of claim 1, wherein the cleaning composition comprises 1 to 20 parts by weight of the degreaser per 5 to 70 parts of the rubber solvent and 5 to 70 parts by weight of diluent per 5 to 70 parts by weight of the rubber solvent.
3. (original) The method of claim 1, wherein the degreaser comprises a glycol ether.
4. (original) The method of claim 3 wherein each of the degreaser, rubber solvent, and the polar, organic diluent has a flash point of at least 30°F.
5. (original) The method of claim 1, wherein the rubber solvent comprises an aliphatic hydrocarbon solvent.
6. (original) The method of claim 5, wherein the hydrocarbon solvent comprises an aliphatic naphtha.
7. (original) The method of claim 1, wherein the diluent comprises an alcohol having at least about 5 carbon atoms.
8. (original) The method of claim 7, wherein the alcohol is selected from hexanol and iso-hexanol.

9. (original) The method of claim 1, wherein the degreaser comprises glycol ether, the rubber solvent comprises an aliphatic naphtha, and the diluent comprises an alcohol.

10. (original) The method of claim 3 wherein each of the degreaser, rubber solvent, and the polar, organic diluent has a flash point of at least 50°F.

11. (original) The method of claim 3 wherein each of the degreaser, rubber solvent, and the polar, organic diluent has a flash point of at least 65°F.

12. (original) The method of claim 1, further comprising the step of contacting the material with at least one additional fluid composition.

13. (original) The method of claim 1, wherein said contact with the additional fluid composition occurs after contact with the cleaning composition.

14. (currently amended) A method of hand cleaning composition, comprising the steps of:

providing a hand cleaning composition, comprising:

- (a) an oil solubilizing amount of a degreaser;
- (b) a rubber solvent; and
- (c) a polar, organic diluent; wherein at least one of the degreaser, rubber solvent, and the polar, organic diluent has a flash point of at least 30°F; and

contacting a soiled hand with the hand cleaning composition in a manner to clean the soiled hand.

15. (currently amended) The cleaning composition method of claim 14, wherein the cleaning composition comprises 1 to 20 parts by weight of the degreaser per 5 to 70 parts of the rubber solvent and 5 to 70 parts by weight of diluent per 5 to 70 parts by weight of the rubber solvent.

16. (currently amended) The cleaning composition method of claim 14, wherein the degreaser comprises a glycol ether.

17. (currently amended) The cleaning composition method of claim 14 wherein each of the degreaser, rubber solvent, and the polar, organic diluent has a flash point of at least 30°F.

18. (currently amended) The cleaning composition method of claim 14, wherein the rubber solvent comprises an aliphatic hydrocarbon solvent.

19. (currently amended) The cleaning composition method of claim 14, wherein the rubber solvent comprises an aliphatic naphtha.

20. (currently amended) The cleaning composition method of claim 14, wherein the diluent comprises an alcohol having at least about 5 carbon atoms.

21. (currently amended) The cleaning composition method of claim 20, wherein the alcohol is selected from hexanol and iso-hexanol.

22. (currently amended) The cleaning composition method of claim 14, wherein the degreaser comprises glycol ether, the rubber solvent comprises an aliphatic naphtha, and the diluent comprises an alcohol.

23. (currently amended) The cleaning composition method of claim 14 wherein each of the degreaser, rubber solvent, and the polar, organic diluent has a flash point of at least 50°F.

24. (currently amended) The cleaning composition method of claim 14 wherein each of the degreaser, rubber solvent, and the polar, organic diluent has a flash point of at least 65°F.

25. (currently amended) ~~A method of cleaning a material comprising a radioactive contaminant, comprising the step of contacting the material with an organic degreaser composition.~~ A method of cleaning a material contaminated with a radioactive contaminant, comprising the step of contacting the material with a cleaning composition comprising:

- (a) an oil solubilizing amount of a degreaser;
- (b) a rubber solvent; and
- (c) a polar, organic diluent;

wherein at least one of the degreaser, rubber solvent, and the polar, organic diluent has a flash point of at least 30°F; and

wherein the cleaning composition comprises 1 to 20 parts by weight of the degreaser per 5 to 70 parts of the rubber solvent and 5 to 70 parts by weight of diluent per 5 to 70 parts by weight of the rubber solvent.
